

Project 02 – Create and Secure an AWS IAM Administrator Account

Executive Summary

Created a dedicated AWS IAM administrator account to eliminate daily use of the AWS root account. Implemented AWS IAM best practices by creating an Administrators group, assigning the AdministratorAccess managed policy, adding the administrator user to the group, configuring a complex password, and enabling Multi-Factor Authentication (MFA). Verified that permissions are inherited through the group and that no long-term access keys were created.

Objectives

Reduce reliance on the root account; implement IAM best practices; secure privileged access with MFA; manage permissions through IAM groups.

Implementation

1. Created Administrators IAM group. 2. Attached AdministratorAccess managed policy. 3. Created administrator IAM user. 4. Assigned user to Administrators group. 5. Configured strong password. 6. Enabled MFA. 7. Verified inherited permissions and absence of access keys.

Security Best Practices

- Root account reserved for emergency use.
- MFA enabled.
- Group-based permission management.
- No long-term access keys.
- Centralized administrative permissions.

Skills Demonstrated

AWS IAM, Identity and Access Management, RBAC, MFA, Cloud Security, Privileged Access Management.

Generate policy based on CloudTrail events

You can generate a new policy based on the access activity for this user, then customize, create, and attach it to this role. AWS uses your CloudTrail events to identify the services and actions used and generate a policy. [Learn more](#)

Generate policy

No requests to generate a policy in the past 7 days.

Assign MFA device

Use MFA to increase the security of your AWS environment. Signing in with MFA requires an authentication code from an MFA device. Each user can have a maximum of 8 MFA devices assigned. [Learn more](#)

Access keys (0)

Create access key

Use access keys to send programmatic calls to AWS from the AWS CLI, AWS Tools for PowerShell, AWS SDKs, or direct AWS API calls. You can have a maximum of two access keys (active or inactive) at a time. [Learn more](#)

No access keys. As a best practice, avoid using long-term credentials like access keys. Instead, use tools which provide short term credentials. [Learn more](#)

Create access key

API keys (0)

Actions

Generate API Key

API keys are short-term credentials that can be used to make API calls. They are not recommended for long-term use. [Learn more](#)
